- ❑ Important files (pdf, docs, xlsx etc) as well as images can be uploaded
- ❑ Any Registered Student will be able to give post
- ❑ Internet needed
- ❑ Anyone can access using WebAddress

LayOut

❑ First Page

Sign in page. As background image, there is a HD Group image of CSE'16. It is written in ASP.net using C#. Who doesn't register, can go on Registration page onclick "Register". Who registers already, input Email as well as Password and has Access to mother page.

❑ Second Page

Registration page. A php form and MySQL are used to store information about Applicants. As background image, HD group photo is used.

❑ Third Page or MOTHER Page

Main Page. Parallax type page. We use JavaScript to design this page. Registered members can easily post on here onclick "PostHere" option. Posts will come Parallely using Giver's Registered image as background image. At bottom, details of SUST and developers are given.

Advanced Option There is a option called "Caution" which means Very Emergency. If member posts a POST as caution, it immediately notifies everyone even if not connected with internet. It's a long-term things.

Pro Advanced Option A desktop Application and an Android Application ON "Virtual CR" are about to build to prove this concept very effective. We need time as well as inspirations.

Actually to get rid of using Facebook as a Regular option, we want to do this.
